## **COMPUTER NETWORK LAB-3A**

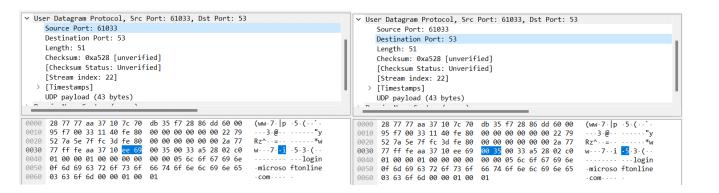

~ Đinh Việt Thành 2152966

1. Select *one* UDP packet from your trace. From this packet, determine how many fields there are in the UDP header. (You shouldn't look in the textbook! Answer these questions directly from what you observe in the packet trace.) Name these fields.

Answer: UDP header contains 4 fields: source port, destination port, length, checksum

2. By consulting the displayed information in Wireshark's packet content field for this packet, determine the length (in bytes) of each of the UDP header fields.

<u>Answer</u>: The UDP header has a fixed length of 8 bytes. Each of these 4 header fields is 2 bytes long.

```
User Datagram Protocol, Src Port: 61033, Dst Port: 53
                                                                                            User Datagram Protocol, Src Port: 61033, Dst Port: 53
     Source Port: 61033
                                                                                                Source Port: 61033
     Destination Port: 53
                                                                                                Destination Port: 53
     Length: 51
                                                                                                Length: 51
     Checksum: 0xa528 [unverified]
                                                                                                Checksum: 0xa528 [unverified]
     [Checksum Status: Unverified]
                                                                                                [Checksum Status: Unverified]
     [Stream index: 22]
                                                                                                [Stream index: 22]
    [Timestamps]
                                                                                                [Timestamps]
     UDP payload (43 bytes)
                                                                                                UDP payload (43 bytes)

```

3. The value in the Length field is the length of what? (You can consult the text for this answer). Verify your claim with your captured UDP packet.

<u>Answer</u>: The length field specifies the number of bytes in the UDP segment (header plus data). An explicit length value is needed since the size of the data field may differ from one UDP segment to the next.

The length of UDP payload for selected packet is 43 bytes. 51 bytes - 8 bytes = 43 bytes.

Length: 51

4. What is the maximum number of bytes that can be included in a UDP payload? (Hint: the answer to this question can be determined by your answer to 2. above)

<u>Answer</u>: The maximum number of bytes that can be included in a UDP payload is the difference between  $65535 (= 2^{16} - 1)$  bytes and the header field (8 bytes). Therefore the maximum payload is: 65535 - 8 = 65527 bytes.

5. What is the largest possible source port number? (Hint: see the hint in 4)

**Answer**: The largest possible source port number is  $(2^{16} - 1) = 65535$ .

6. What is the protocol number for UDP? Give your answer in both hexadecimal and decimal notation. To answer this question, you'll need to look into the Protocol field of the IP datagram containing this UDP segment (see Figure 4.13 in the text, and the discussion of IP header fields).

**Answer**: The IP protocol number for UDP is 0x11 (hex) which is 17 (decimal).

```
0110 .... = Version: 6

7. Examine a pair of UDP packets in which your host sends the first UDP packet and the second UDP packet is a reply to this first UDP packet. (Hint: for a second packet to be sent in response to a first packet, the sender of the first packet should be the destination of the second packet). Describe the relationship between the port numbers in the two packets.

<u>Answer</u>: The source port of the UDP packet sent by the host is the same as the destination port of the reply packet.

Conversely the destination port of the UDP packet sent by the host is the same as the source port of the reply packet.

## DNS query message

```
V User Datagram Protocol, Src Port: 61033
    Source Port: 61033
    Destination Port: 53
    Length: 51
